## WAREHOUSE & INVENTORY MANAGEMENT SOLUTIONS

### Inventory Management System

- Focuses on overall inventory levels and their status.
- Provides information to calculate sales trends, profit margins, and holding costs.
- Reorder based on demand and preferred stock levels.
- Caps on inventory record.
- Tracks the movement and location of stock within the warehouse.

### Invoicing

- Invoices are created and sent automatically.
- Custom discounts and flexible payment options
- Multiple formats supported (Email, CSV, EDI).
- Detailed breakdown of goods, services, and total amount.
- Complete order history (payments, shipping, staff, time tracking).

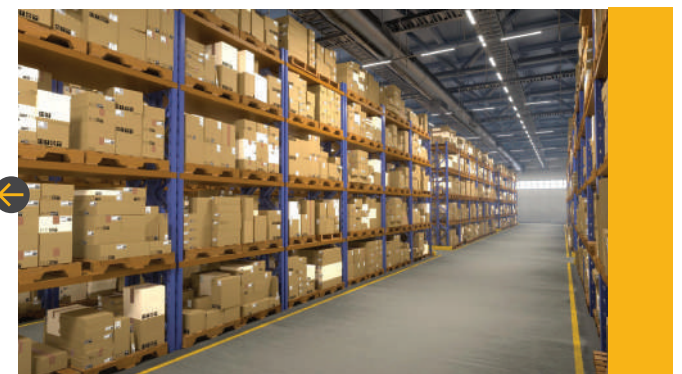

### Receiving And Putaway

- Checking the quality of goods received.
- Verify the condition of received goods and ensure the correct quantity of inventory is obtained.
- Allocating space for the goods in the warehouse.
- Preparing paperwork per shipment.
- Lot management and Bin Management.

### Storage

- Warehouse storage optimization is critical; Poor management increases costs.
- Efficiency is measured through storage area, capacity, usable space, and utilization.
- Though time-consuming and costly, it delivers long-term business benefits.

Stock Level Control uses methods like FIFO, LIFO, Min-Max, JIT, bin systems, and VMI to maintain optimal inventory levels.

- FIFO and LIFO
- Min-Max Inventory Control
- JIT Inventory
- Fixed Order Quantity
- Fixed Period Ordering
- Set Par Levels

## Creating Purchase Orders

A Purchase Order (PO) is a legally binding document listing the PO number, issue date, product details and quantities, unit prices, delivery information, addresses, payment terms, total amount, and authorized signature.

## Order Management

Order Management covers the process from order placement to fulfillment, ensuring accurate tracking and coordination. With a WMS, businesses improve speed, reduce errors, and enhance customer satisfaction.

## Picking

A WMS guides picking with barcode, RFID, and AI, improving speed, accuracy, and warehouse efficiency.

## Packing

The system automates packing and shipping documents, reducing manual work & ensuring accurate, standardized quality control.

## Shipping

Shipping sends packed orders via selected carriers using local or international methods. A WMS provides automated rate calculation, real-time tracking, order merging, and support for cross-docking and drop shipping.

## Returns

Warehouse Management System (WMS) can help streamline this unpleasant process by automating every step: creating the return, recording the reason, updating stock, issuing full or partial refunds, and generating reports.

## Financial Management & Reporting

WMS financial reports track performance and provide insights for better decisions.

## Integration With Other Software (Customization)

Integrates with other software  
Real-time financial calculations  
Multi-currency & tax support
